Henry Gao

(347) 440-6805 | gao.hen@northeastern.edu | linkedin.com/in/hengao | Portfolio: henrygao.vercel.app

EDUCATION

Northeastern University, Boston, MA

Master of Science in Electrical and Computer Engineering (Microsystems, Materials, & Devices) *Expected April 2028*

Bachelor of Science in Computer Engineering *April 2026*

Coursework: Intro to MEMS, Analog CMOS Design, Electronics, Circuits and Signals, Robotics, FPGA Design

Certifications & Skills: Certified SOLIDWORKS Associate | Circuit Design | Oscilloscope | Multimeter | Altium | Kicad

WORK EXPERIENCE

Bevi **Boston, MA**

Electrical Engineer Co-op Jul – Dec 2025

- Drove bring-up testing of key PCB boards, uncovering critical defects before production deployment
- Designed and deployed an automated hardware validation system to characterize touchscreen response under varying capacitive loads, reducing manual testing by 80+ hours
- Identified and fixed several bugs found within head unit control board current protection circuits

PHILIPS **Andover, MA**

Hardware Verification Support Engineer Co-op May – Dec 2024

- Spearheaded the design and implementation of a modular robotic test system to validate the operating limits of next-generation ECG and SPO2 monitors, saving Philips over 150+ hours per product in testing
- Built universal LabVIEW automation software to simplify operation of robotic systems, ensuring a more streamlined programming process for any future testing robots

PARSES Lab **Boston, MA**

Undergraduate Researcher Jan 2024 – Jan 2025

- Constructed flexible circuits for a wearable sleeve that detects if a patient has edema
- Collaborated on the design for stretch-sensitive capacitors used for sensing muscular hypertrophy

PROJECT & LEADERSHIP EXPERIENCE

Growver | Generate Product Development Studio | Electrical Engineer Jan – Apr 2026

- Led battery and BMS design for Growver, an autonomous agriculture robot that plants saplings
- Performed schematic capture and layout of an I2C BMS PCBA in Altium with cell balancing and temp monitoring
- Assembled a custom modular 24V Li-ion battery pack using spot-welded nickel strip interconnects

Mira | Forge Product Development Studio | Project Lead Sep – Dec 2025

- Led a team of 6 engineers to design Mira, a smart mirror that self-cleans, blow dries hair, and displays important day-to-day information
- Designed system level circuit for hair blowing, screen display, and self-cleaning using an ESP32 to control and communicate with a weather API and sensors via I2C, SPI, and UART protocols
- Developed fully modular hair blowing system using SOLIDWORKs air flow analysis tool

Greentower | Generate Product Development Studio | Electrical Engineer Sep – Dec 2025

- Created Greentower, a modular at home hydroponics system that automates watering, nutrient delivery, and sunlight exposure to growing plants
- Designed a custom pH sensing PCBA in Altium to read and filter analog voltage signals from a pH Sensor over SPI protocol
- Collaborated on the development of a main PCBA for the onboard power, MCU, motor, and LED systems

Medical Device Mate Test Robot | PHILIPS | Hardware Engineer May – Dec 2024

- Mimicked human behavior by wiggling to mate and un-mate ECG and SPO2 cables from corresponding monitors
- Utilizes C++ and LabVIEW to configure cycle speed, time, and force
- Successfully supported 35k test cycles while recording force values
